

Project Title: Jain Education Society's ERP System

Project Goal: To develop a web-based CRM for the Jain Education Society to manage student applications for financial aid (Freeship and Loans), track their status, and maintain a clean digital record.

Budget: ₹50,000 **Duration:** 3 Months

Core Modules & Feature Breakdown

Here is a simplified list of all the features required for this phase of the project.

Module 1: System Foundation & Student Verification

This module sets up the base for verifying eligible students.

1. Master Student List:

- An Admin must be able to upload a CSV file containing the mobile numbers of all eligible students.
- These numbers will be stored in a master database table (e.g., `master_student`) and will be used to validate all incoming applications.

Module 2: Student-Facing Application Portal

This is the public-facing section where students will apply for financial aid.

1. General Student Application Form:

- A primary form for students to submit their initial details.
- **Fields Required:**
 - Full Name
 - Email Address
 - Mobile Number (must be unique for each application)
 - Profile Picture (JPEG format, size < 2MB)
 - State (Dropdown Menu)
 - City (Text Field)
 - Other necessary fields as per the reference form image.
 - File Upload feature for required documents (PDFs only).
- **Validation Logic:** Upon submission, the system will check if the student's mobile number exists in the **Master Student List**.
 - **If Match Found:** The application is accepted and the student's data is saved into the main student table (e.g., `tbl_student`).
 - **If No Match Found:** The application is rejected.

2. Post-Submission Actions:

- **Download PDF:** After successful submission, the student must be given an option to download a PDF copy of their submitted details. This PDF should include the Education Trust's digital signature.

- **Email Confirmation:** An automated email will be sent to the student's email address, with the same digitally signed PDF attached.

Module 3: Admin Control Panel (CRM)

This is the secure backend where the administrative staff will manage all data.

1. Student Data Management:

- **Student Listing Page:** A dashboard view showing all accepted student applications from the `tbl_student` table.
- **Advanced Filtering:** The admin must be able to filter the student list by:
 - Name
 - Mobile Number
 - Email
 - Age
 - Qualification
- **Manual Entry:**
 - **Add Single Student:** A button/form for the admin to add a new student's record one by one.
 - **Bulk Upload:** An option to upload a CSV file with student details (matching a fixed header format) to add multiple students at once.

2. Data Export:

- The admin must be able to export the student list to a PDF file.
- **Important:** The export function must respect the active filters. If the admin filters the list by "City = Mumbai", only the Mumbai students should be included in the exported PDF.

Module 4: Financial Aid Forms & Management

This module handles the specific forms for different types of financial aid offered by the trust.

1. Freeship Application Form:

- **Student Details:** Name, Since which year they are associated with the trust, Freeship Type (Half/Full).
- **Guarantor Details:** Full Name, Occupation, Address, PIN Code, Mobile, Email.
- **Guarantor Validation:** The Guarantor's mobile number will be validated against the **Master Student List** before the form can be submitted.
- The submission date will be auto-filled with the current date.

2. Foreign Loan Application Form:

- **Student Details:** Photo (<2MB), Name, Address, Birth Place, Date of Birth, Hometown, Mobile, etc. (No validation against the master list is required for this form).
- **Expenditure Details:** Fields to enter amounts for Travelling, Tuition Fees, Lodging, etc., with an auto-calculating "Total Amount" field.
- **Terms & Conditions:** A mandatory checkbox that the user must tick to agree to the terms. The form cannot be submitted unless this is checked.

3. Small Loan Application Form:

- This was mentioned as a type, but no specific fields were provided. **(Action Required: Client needs to provide the fields for this form).**
- 4. **Loan Status Management:**
 - In the Admin's loan listing view, each student record will have a simple dropdown or button to update the loan status.
 - **Statuses:** Paid / Unpaid.
- 5. **Loan Document Printing:**
 - The admin must be able to print/generate a PDF for both Freeship and Foreign Loan applications, formatted according to the provided sample PDF designs.

Features on Hold / Out of Scope for this Phase

To meet the budget and timeline, the following features will be deferred:

- **OTP Verification:** Mobile number verification via OTP is currently on hold.
- **Past Student / Alumni Management:** The feature to move students to a "Past Student History" table is on hold. The focus is only on managing active applicants.
- **Automated Cloud Backup:** The research and development for automated database backups to the cloud will be discussed later and is not part of this 3-month project.
- **Advanced ERP Modules:** All features from the original plan's Phase 4 (Analytics Dashboard, Document Storage) and Phase 5 (Email/SMS Alerts, Multi-User LAN access) are out of scope for this initial project.

Detailed Budget of the project:

Phase / Module	Key Deliverables	Estimated Cost (INR)
1. Foundation & Backend Setup	• Database Design (Schema for all tables: master_student, tbl_student, tbl_freeship, tbl_foreign_loan, etc.) • Setting up the core application framework • Admin feature to upload the initial master_student CSV file.	₹ 6,000
2. Student Application Portal	• Development of the public-facing student application form with all fields. • Logic for mobile number validation against the master list • File & Image upload functionality with validation (size, type) • Post-submission PDF generation with a digital signature image. • Automated confirmation email with PDF attachment.	₹ 15,000

3. Admin CRM & Management	• Secure Admin login. • Student Listing Dashboard: View all applicants. • Advanced Filtering & Search: As per requirements (Name, Mobile, etc.). • Manual Data Entry: Forms for adding single students and bulk CSV uploads. • Financial Aid Forms: Backend forms for Freeship and Foreign Loan applications. • Loan Status Management: Dropdown to mark loans as "Paid/Unpaid".	₹ 20,000
4. Reporting & Finalization	• PDF export functionality for filtered student lists. • PDF generation for specific loan forms as per samples. • Finalizing all workflows and user interfaces.	₹ 6,000
5. Testing, Deployment & Support	• End-to-end testing of all features and bug fixing. • Preparation of software package for LAN deployment • A simple deployment guide for the client's IT person. • 1 week of post-deployment support for any critical bugs.	₹ 3,000
TOTAL		₹ 50,000

Payment Schedule: (Rough)

Milestone	Deliverable	Payment Amount
1. Project Kick-off	Upon signing the agreement and finalizing requirements.	₹ 20,000 (40%)
2. Mid-Project Demo	Successful demo of the complete Student Application Portal (Module 2) and the basic Admin Student Listing view.	₹ 20,000 (40%)
3. Final Delivery	Handover of the complete, tested software package ready for deployment on the LAN.	₹ 10,000 (20%)
TOTAL		₹ 50,000
